

BOSE 251 ENVIRONMENTAL SPEAKERS

WHITE

BLACK

- Our best wall-mount outdoor speakers
- Extremely wide sound field for larger outdoor areas
- Outside speaker cabinet designed to reproduce low frequencies with minimal audio distortion
- Tested to withstand snow, rain, salt and extreme temperatures
- Five-year limited warranty

Bose's best wall-mount outdoor stereo speakers deliver balanced stereo sound over a much wider area than most conventional outdoor speakers. And these award-winning exterior speakers are guaranteed to withstand harsh weather.

Mount 251® outdoor stereo speakers to your exterior walls, connect to your stereo components or Lifestyle® system and SA-3 amplifier, and enjoy quality Bose sound across a much wider listening area.

Speakers that have you covered

With conventional outside speakers, stereo sound can be heard in only a few "sweet spots" and not throughout the broader range of your patio, pool or yard. And they often can't reproduce the low frequencies that provide impact.

But innovative Bose 251 speakers use an Articulated Array® speaker design to produce an extremely wide sound field. Each outside speaker cabinet houses two speakers set at precise angles so you experience consistent stereo effects as you move around outdoors. And the unique multi-chambered design of the Bose 251 exterior speaker cabinet minimizes audible distortion from low frequencies, for sound with clear, natural impact.

Bose outdoor speakers are designed for harsh conditions. These weather resistant speakers are engineered and tested to withstand snow, rain, salt and temperature extremes of 60° C to -30° C. They are also protected by a five-year limited warranty.

Bring Lifestyle® system performance outdoors

If you own a Lifestyle® system, simply add the 251 environmental speakers/SA-3 amplifier package to bring Lifestyle® system performance outdoors. Experience a patio speaker that brings music to the pool, the deck or

wherever you like to listen outside, even while the same Lifestyle® system plays different music or movies indoors.

FEATURES

Bose environmental testing simulates exposure to sunlight, rain, heat, ice, salt and water—proof of the extreme conditions these outdoor speakers can endure and still deliver reliable, long-lasting performance.

Articulated Array® speaker design includes precisely positioned drivers to provide a large, consistent sound field for outdoor listening.

Syncom® computer tested to ensure one of the highest levels of quality and reliability in the audio industry.

Weather-resistant brackets and hardware withstand the rigors of year-round outdoor placement.

Multi-chambered enclosure is uniquely structured to minimize audible distortion from low frequencies. You can enjoy clear, natural sound from an outside speaker enclosure that easily mounts to walls in your deck, garden or pool area.

One woofer (13.3cm) in a proprietary multichambered enclosure produces deep, full low frequencies, with minimal audio distortion.

Twiddler® drivers (6.4cm) with glass composite cone and silky light surround deliver clear, high frequencies from a speaker that resists deterioration under extreme conditions.

Two full-range drivers (6.4cm) positioned in an Articulated Array® speaker design provide consistent, lifelike sound over a large listening area.

Woofers (13.3cm) with polymer fiber composite cone and butyl rubber surround deliver high quality sound from a speaker that resists deterioration under extreme conditions.

Mineral and glass-filled polypropylene cabinet provides added durability against extreme conditions.
